Ten Years of Go

ROB PIKE'S GOOGLE TECH TALK ON THE GO

PROGRAMMING LANGUAGE

Probably not of much interest if you're not at least somewhat of a comp-sci nerd, but, if you are, how many times do you get see a legend like Pike introduce a new programming language? I have a feeling that Go is going to be a big deal.

SVGo First Commit

May 2011

A screenshot of a web browser window titled "localhost:1999/hwsvg.go". The left pane contains a code editor with the following Go code:

```
package main

import (
    "github.com/ajstarks/svg"
    "os"
)

func main() {
    canvas := svg.New(os.Stdout)
    width := 700
    height := 500
    style := "font-size:72pt;fill:white;text-anchor:middle"

    canvas.Start(width, height)
    canvas.Rect(0, 0, width, height)
    canvas.Circle(width/2, height, width/2, "fill:rgb(77, 117, 232)")
    canvas.Text(width/2, height*3/4, "hello, world", style)
    canvas.End()
}
```

The right pane displays a rendered SVG visualization. It features a large blue circle centered on a black background. Inside the blue circle, the text "hello, world" is displayed in white, matching the style defined in the code.

(Shift-Enter to compile and run.) *Compile and run after each keystroke*
